

What Space Exploration Means to Me

From the fantasies of Jules Vern to the Kitty Hawk

From SkyLab to the Maiden flight of the Columbia

From Christopher Columbus to Daniel Boone

American has always been a country for explorers.

Then there are the brave men & women in the space program

They are not satisfied yet, they need to press on and explore further

They wake up every morning and choose the path less traveled

Instead of doing what's easy, they do what's hard and unknown

Astronauts risk their lives to explore outer limits for a better future

Space exploration means nothing is impossible, everything may not be easy, I might fail before I succeed, I'll never give up on my dreams.

My dream is to be an astronaut, working with NASA. Some of you may meet me again, on the moon.

Nicolas Rotundo, Age 10
